JavaScript Developer, Aloomba

January 2016 - Present

Performed multiple roles in a fast paced startup environment including development, interaction design and project management. Developed a modular and reusable component library to be utilized across multiple products. Built a robust content management system for mobile event apps in React and Redux. Formed a User Experience team which executed the first user studies in Aloomba's history. Performed internal user studies on the contract fulfillment process to identify pain points and gulfs of communication in order to determine more appropriate software solutions and design a user friendly method for gathering data and feedback from our clients.

Front End Developer, NC2Media

January 2015 - December 2015

Used cutting edge technologies and agile methodologies to craft innovative and experimental web applications. Responsible for building interactive solutions using componentized AngularJS and Sass, focusing on performance and maintainability. Utilized personas and user flows to design better experiences and match users' needs with business objectives. Implemented a living style guide.

Project Manager, UI Design & Mobile Developer, NashvesTN Finalist in HackNashville 6

November 2014

Hackathon group project. Utilized the MEAN Stack, Ionic, and Cordova to create a Mobile & Desktop app that helped non-profit organizations increase their community impact by engaging the Millennial Generation.

Apprentice, Nashville Software School

July 2014 - January 2015

An intensive, full-time six month bootcamp for software engineering and web development. Developed full stack web and mobile JavaScript apps in an iterative and faced-paced environment. Utilized techniques such as pair programming and test-driven development. Collaborated with peers to solve problems and design effective and efficient solutions.
